

MAGAZINE TEST RESULTS

WIND magazine, June 2008:

A great quality to price ratio!

"The BIC Techno 148 is by far the lightest board on the scales. It distances its competitors by 1 kilo, which has direct consequences on the water. Early planing performance is very good, the board glides progressively and without that stop-start feeling."

"Once on the plane and going, the board is very lively and sits the highest on the water allowing you to pass well over the chop. It sails easily into the wind and accelerates well on a reach..."

"Light and well priced, the BIC Techno 148 presents a very good quality to price ratio for those who want to buy a "sure thing" for seasonal freeride use in light winds."

"It is one of the most progressive boards of the group. With a wide user range, it works just as well for learners or for those looking to progress and experience the joys of funboarding."

MAGAZINE TEST RESULTS

Planchemag, June 2008:

The most versatile board of this test!

"The Jungle is the most versatile board of this test. It covers a huge range of use from windsurf to surf, passing via SUP riding and even kayaking... Bearing in mind that it is in windsurf and paddle/surf that it is at its best. A multi-use product, great in the context of use by all the family."

"The Jungle is the lightest, the easiest to carry. It is in Force 1-2 and non-planing conditions that we truly appreciate this board... it is even suitable for learning to windsurf..."

"The strongest point of this board is its handling while surfing, either with or without a sail. Nice, lively and fun in the waves... it turns much shorter than some of the larger SUP boards... Narrower, and thinner in the tail, it is much sportier and a more progressive board than its rivals."
